

ADVANTAGES

- Able to be installed in any manufacturer's loose-fill filters
- ISO 10121-1:2014 tested media
- UL 900 classified for flammability
- Targets oxidizable acidic gases responsible for corrosion and a wide range of volatile organic gases and odours.
- Ideal for the removal of hydrogen sulfide, formaldehyde, ethylene, medium to high molecular weight VOCs, and low volatility organic contaminants

|                       |                                                                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Application           | Targets oxidizable acidic gases responsible for corrosion and a wide range of volatile organic gases and odours in a single stage when space is limited. |
| Media                 | Activated Carbon;Impregnated Activated Alumina                                                                                                           |
| Max Temperature (°C)  | 40                                                                                                                                                       |
| Min Temperature (°C)  | 10                                                                                                                                                       |
| Relative Humidity max | 40%-70%                                                                                                                                                  |
| Installation Options  | All loose-fill molecular air filters.                                                                                                                    |
| Comment               | UL approved                                                                                                                                              |
